

Environmental Mission Statement

MISSION STATEMENT

Legacy has been a “green” company since inception. We exceed mandated environmental compliance and have made conservation and sustainability central in our daily operations. We use our resources wisely, and are committed to preserving them for future generations. We are persistently improving our manufacturing processes with responsible environmental choices.

We use sustainable solid wood products from managed forests and engineered wood products made from recycled woods. We recycle sawdust to provide animal bedding, erosion control and generation of steam for sterilization of surgical instruments.

Our foam cushions and fillings are made of low emission materials. Our environmentally friendly finishes are durable and attractive.

Our environmentally conscious choices do not compromise the durability and longevity of our products. We design and build our products for many years of use, renewability and significant return on investment.

ENVIRONMENTALLY CONSCIOUS

- We recycle all excess or non reusable wood into sawdust that is sold to the North Carolina Highway Patrol for Highway Beautification and Erosion Control.
- All of our Metal Frames are 75% recycled and painted with low VOC paints and polymers.
- Legacy is constantly training and promoting Environmental Consciousness in their Marketing and Sales' Campaigns
- We support Habitat for Humanity and offer a up to 5% rebate for any customers who can provide documentation that they donated their old furniture, (that was replaced by ours,) to that cause. (Salvation Army and other establishments are considered as well.)
- We have an Internal Recycling Program that includes recycling of all excess fabrics, aluminum, steel, papers, cardboard, and plastic containers.
- Our corrugated Products are made with 60% of recycled fibers. We work with two of our vendors that take the boxes that are collected at Legacy and use them for truck padding that is passed from truck to truck as well as reused to package our furniture from their warehouses and plants back to ours.
- We are promoting our Green Fabric lines and giving customers and sales reps additional tools needed to help meet LEED Certification.
- Our Wood Manufacturing Plant recycles the air removing the dust particles in intervals of 10 minutes making the environment safer for the employees.
- We are promoting the Agion line in our Vinyls which is a long lasting, safe, broad spectrum antimicrobial technology that actively targets microorganisms and bacteria on the protected surface of the upholstery. This Agion Technology also is PVC and plasticizer free.

SUSTAINABLE HARDWOODS

This certifies that

Associated Hardwoods Inc.

is an

Appalachian Hardwood Lumber Distributor

*member of Appalachian Hardwood Manufacturers, Inc. and processes
Appalachian Hardwood Lumber from the AHMI territory. This region of
the eastern United States is a*

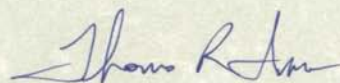

Sustainable Hardwood Forest

*as defined by AHMI and based in part on verified
timber growth versus removal data from the

AGION VINYL

Introducing the next generation of bacteria-resistant upholstery featuring Agion- Silver Ion technology... Isn't Science Beautiful.

What is Agion®?

Agion (silver ion) is a patented, long-lasting, safe, broad-spectrum antimicrobial technology that actively targets microorganisms and bacteria on the protected surface of the upholstery.

How does Agion antimicrobial technology work?

Silver is a naturally occurring and effective antimicrobial material in its ionic form. The Agion patented antimicrobial is "built in" to the upholstery and becomes an integral part of the material, unlike less permanent antimicrobial treatments. Upon contact with moisture (ambient moisture, a sneeze, human contact, etc.) silver ions are activated and released at a slow and steady rate to provide continuous long-lasting protection against damaging bacteria and odor-causing mold, as well as many other microbes.

Is Agion antimicrobial technology safe?

Agion antimicrobials (as an additive) are EPA-registered for a broad range of uses, including uses that involve food and water contact. In addition, they are FDA-listed.

Why are PVC-free and plasticizer-free important?

PVC (polyvinyl chloride) contains many additives that can create toxic emissions when disposed of by incineration or landfill. The chemicals in the toxic emissions are both harmful to humans and the environment. These revolutionary new upholstery fabrics provide a "Reduced Environmental Impact" by being PVC-free.

Plasticizers are typically used in PVC (vinyl) products to soften the "hand" of the product. Plasticizers can leach out of the product over time. Some plasticizers are considered to be toxic, and therefore potentially dangerous. These products do not contain plasticizers, yet remain soft, pliable, and actually increase the comfort of your furniture.

Do these fabrics include moisture-barrier protection?

Yes. These fabrics are impervious to liquids and do not allow liquid of any kind to penetrate or pass through to the furniture's under padding.

Are these fabrics cleanable and easy to maintain?

Yes. Most stains are removed easily with soap and water. It is always recommended to remove stains promptly, as the longer a stain remains on your furniture, the more difficult it will be to remove.

These patterns pass 400,000 double rubs in Abrasion Resistance testing.

These patterns pass California Technical Bulletin 117, Sec. E; UFAC Class 1; NFPA 260 Class 1.

Note: This term and any Corresponding data refer to typical performance in the tests indicated and should not be construed to imply the behavior of this or any other material under actual fire conditions. These patterns may comply with California Technical Bulletin 133 when used in conjunction with other suitable components.

RECYCLED FABRICS

Today, caring for the environment is no longer an option, it is a responsibility. Future generations are depending upon each of us to make better choices.

Legacy Furniture Group is doing it's part to help promote a healthier, cleaner environment. Our efforts include recycling sawdust for greenspaces, recycling cans, papers, plastics, and using post-consumer content materials throughout our business.

We are also working to offer better choices to our customers. That's why we are proud to be partnering with Designtex in bringing you it's new "Green" collection. Beautiful top-quality fabrics, designed for today's style, made from yesterdays materials. Brilliant!

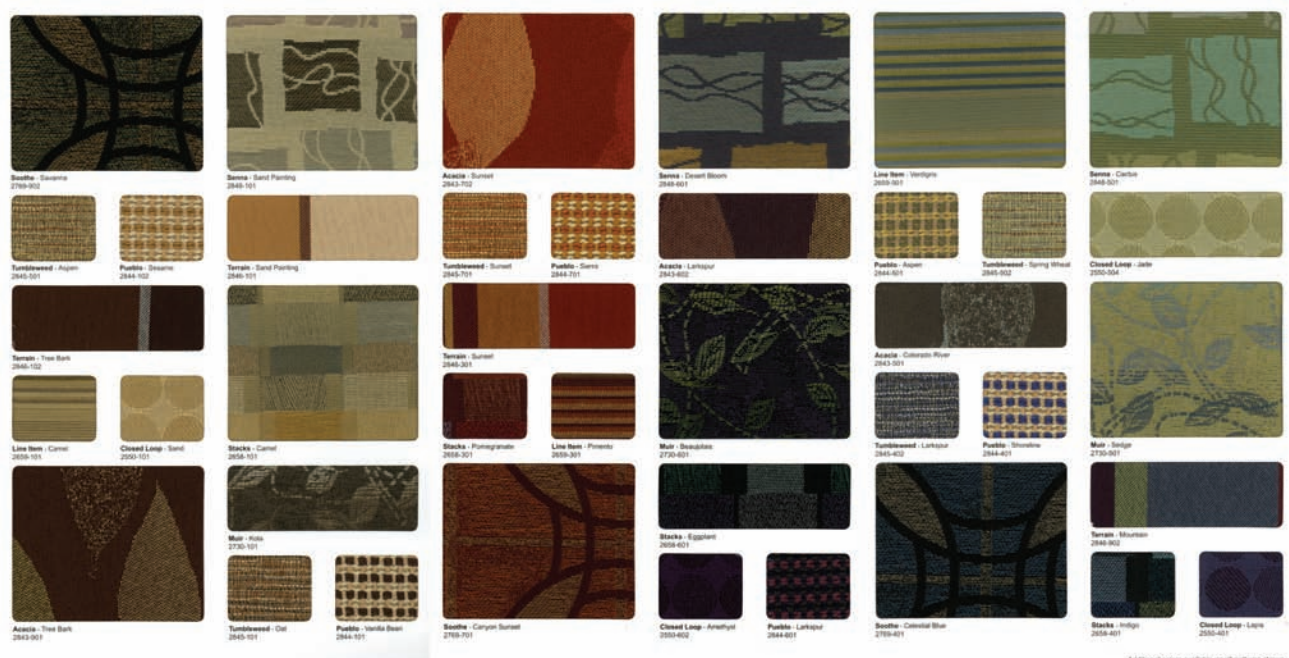

We hope that these choices inspire your design creativity.

For even more choices, visit www.designtex.com or contact your Legacy representative.
